Uncloud (Synthetic Monitoring Application) SaaS Projects_

uncloud

Synthetic Monitoring Application

This is a cloud-based SaaS application for monitoring Ping, REST APIs, and headless scripts. In this project, I was responsible for designing the product logo, developing interactive SVG components, creating the overall UI/UX, building the user interface with Vue.js, and implementing backend functions such as alert/notification integration and adoption score features. The application is built on microservices for authentication, notification, and other services. Vue.js serves as the frontend, while Node.js is used for the backend. I utilized Figma for designing illustrations and UI/UX, and Photoshop for creating the application logo.

Tools: Vue.js, Node.js, MongoDB, AWS, Figma, HTML, CSS

EC Manager (Ecommerce Platform) SaaS Projects_

Ecommerce Manager

Platform for running Ecommerce Applications

It is one of the biggest projects I have worked on, encompassing all essential eCommerce management functions, including integration with Stripe and Paytabs payment gateways, a real-time notification system, product management, order management, a content management system, discount management, and a blog, among others. React.js is used for the frontend, while Node.js serves as the backend. Additionally, three microservices have been developed to handle authentication, file management, and other eCommerce functionalities. API access is provided to utilize the eCommerce Manager's features within various eCommerce applications.

Tools: React.js, Node.js, MongoDB, HTML, CSS, cPanel

PerfAgents Platform Web Applications_

PERFAGENTS PLATFORM

Platform for managing SaaS Products

This is a cloud-based application for managing users and their subscriptions for various types of SaaS applications. In this project, I was responsible for designing the product logo using Photoshop, developing the overall UI/UX in Figma, building the user interface with Vue.js, and implementing several backend functions.

Tools: Vue.js, Node.js, MongoDB, HTML, CSS, AWS, Figma

The screenshot shows the PerfAgents Platform Subscription Manager dashboard. At the top left, there's a progress bar indicating "You are 30% done setting up". On the right, it says "You've 7 days left in your trial" with a blue "Upgrade" button. The main title is "PerfAgents Platform" with the subtitle "Unified console for managing your enterprise PerfAgents account". Below the title, the navigation path is "Home / Subscription Manager". To the right of the path are "Status" and "Search" filters. The main content area has a table with columns: Product, Plan, Type, System Status, Start Date, Next Billing Date, and Status. One row is shown for "Uncloud" with a Free Trial plan, SaaS type, green system status, start date of August 28, 2023, next billing date of September 4, 2023, and an "In Trial" status. A "Upgrade Now" button is also present. Below the table, a section titled "Subscriptions (1 of 1)" is shown. On the left, there's an "Account Details" panel with fields for Company (redacted), Phone (redacted), and Email (redacted). On the right, there's an "Adoption Score" section with a large circular progress indicator showing "30% Unclouded". At the bottom, there are four contact sections: "Customer Success" (with a phone icon and a 100% completion status), "Sales Contact" (with a mail icon and a 100% completion status), "Call PerfAgents Engineer" (with a phone icon and two links: "Schedule a call" and "Send an email"), and "Feedback" (with a speech bubble icon).

Product	Plan	Type	System Status	Start Date	Next Billing Date	Status

C PerfAgents 2023

The screenshot shows the PerfAgents Platform interface. At the top left, there's a trial notice: "You've 7 days left in your trial" with an "Upgrade" button. The main title is "PerfAgents Platform" with a subtitle "Unified console for managing your enterprise PerfAgents account". Below the title, the navigation bar includes "Home / Audit Logs". The main content area is titled "Audit Logs" and features a search/filter bar with dropdowns for "Location", "IP Address", "Email", "Timestamp" (set to IST), "Operations", "Role", and "Device". The timestamp dropdown has an upward arrow indicating sorting order. The bottom of the screen shows a dark footer with performance metrics: "100%", "100%", and a refresh icon.

KnotBlaze Service Watcher

Web Applications_

The screenshot shows the KnotBlaze 1.0 web interface. At the top, there's a navigation bar with tabs: ALL, SERVER 1, EC MANAGER, SITEWATCH, KNOT MAIL, SERVER 2, KNOT STATUS, SERVER 3, and MAIL SERVER. Below the navigation is a search bar and a timestamp: 21/10/2024, 3:45:03 pm. A prominent 'Check Now' button is located in the top right corner. The main content area is divided into sections: SERVER, DATABASE, SERVICE, and MAIL. Under SERVER, there are three cards for Server 1, Server 2, and Server 3, each showing a green 'Active' status icon and a 'server' link. The other sections (DATABASE, SERVICE, MAIL) are currently collapsed. A 'Privacy + Terms' link is at the bottom right.

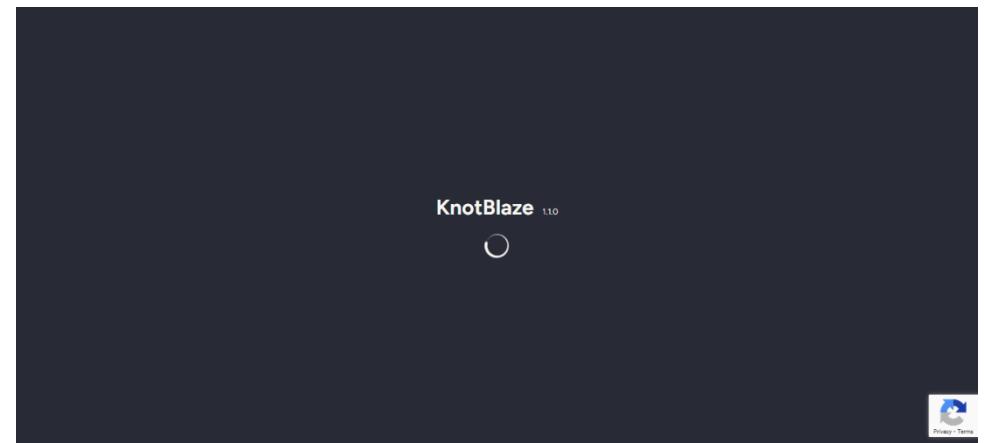

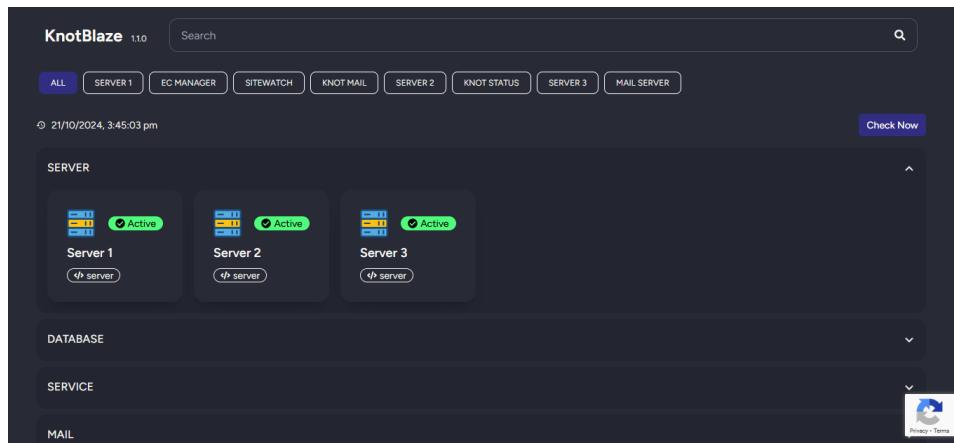

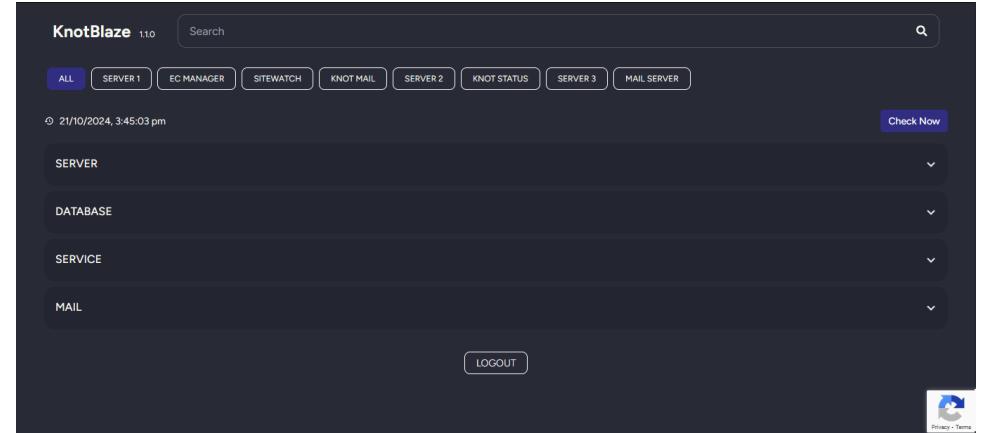

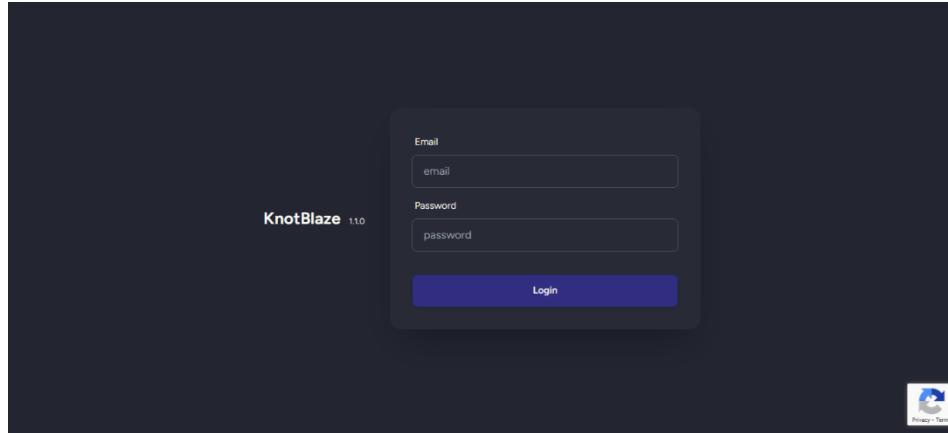

This screenshot shows the same KnotBlaze 1.0 interface as above, but with different section states. The SERVER, DATABASE, SERVICE, and MAIL sections are now collapsed, indicated by small downward arrows next to their names. A 'LOGOUT' button has been added at the bottom center. The rest of the interface, including the navigation bar, search bar, timestamp, and 'Check Now' button, remains the same.

KNOTBLAZE SERVICE WATCHER

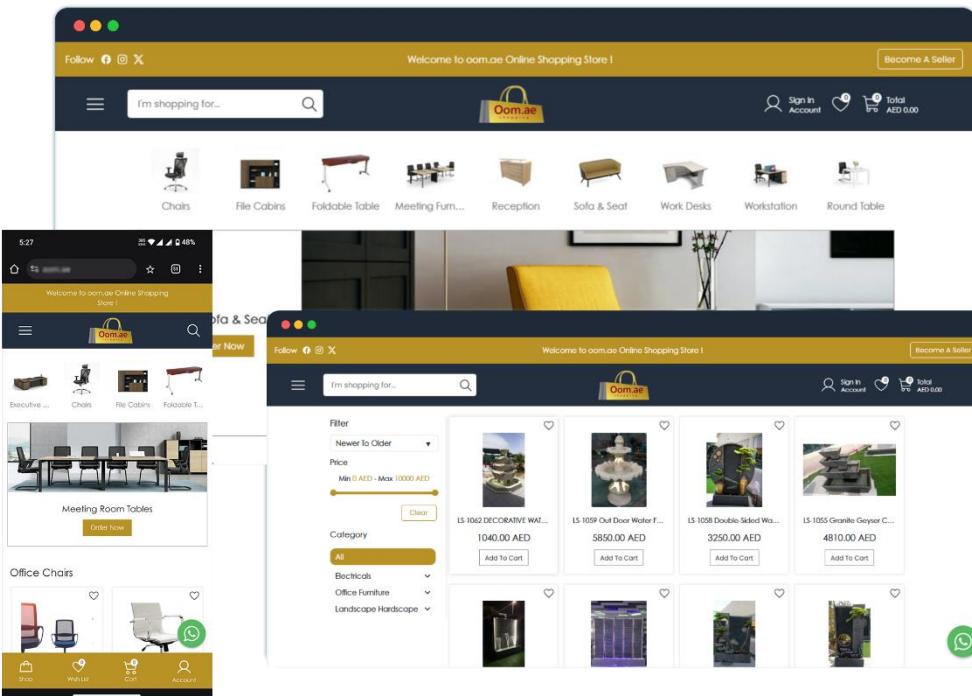

Application for monitoring services

A cross-platform application designed to monitor various types of services, ensuring continuous operational availability. This application assists organizations in maintaining system uptime of 99.99%. It features a comprehensive notification system that includes Slack, mobile, email, and web alerts to promptly inform users whenever a service is down.
